ADDENDUM

TI RS232 Interface Card Owner's Manual

Adding a Second RS232 Interface Card to the Peripheral Expansion System

Please correct the second paragraph on page 8 of your manual to read as follows:

If additional ports are required, the Peripheral Expansion System will accept a second RS232 Interface Card. However, this second card must be permanently modified. It can then be addressed as RS232/3 and PIO/2 or, if a Y-cable is connected to the second card, as RS232/3, RS232/4, and PIO/2. This modification will be done without charge at a Texas Instruments Service Facility, or, if you prefer, you may order a modified card directly from Texas Instruments Consumer Relations. (See page 22 in the manual for the toll-free telephone number.)
